Mathura, India

Summary

Builder-focused Computer Science student with a strong interest in AI systems and real-world problem solving. Passionate about developing scalable, intelligent applications using modern machine learning frameworks. Actively exploring agentic workflows, model optimization, and cloud-native deployments, with the goal of contributing to cutting-edge AI research and residency programs.

Education

Bachelor of Technology in Computer Science Engineering

Sanskriti University

Expected 2029

Technical Skills

- **Languages:** Python, Java
- **AI/ML:** PyTorch, Transformers, Datasets
- **Cloud & DevOps:** Google Cloud, Kubernetes
- **Concepts:** Agentic Workflows, Model Quantization

Key Projects

AI Logical Reasoning System (AMD Hackathon) [GitHub](#)

- Built an AI-driven logical reasoning system using agentic workflows for structured problem solving.
- Implemented model quantization techniques to improve inference efficiency and reduce computational cost.
- Designed modular pipelines for scalable reasoning and decision-making tasks.

Certifications

- Core Java Certification Certificat
- AMD Reinforcement Learning Hackathon Certificat
- CodeBlitz Learning Hackathone Certificat

Key Achievements

- Google Cloud Skills Arcade profile
- Active participant in LeetCode coding challenges
